It is not about our trademarks or meaningless words but only the beginning of the commitment to our clients for the last 50 years in business.

We dedicate our experience and resources so you don’t have to worry about machinery vibrations and get back to what really matters.

“PEACE OF MIND AT WORK, MORE TIME WITH YOUR FAMILY, FRIENDS AND NATURE”

Garrett Sandwell, MET, CVA, ASNT 3
CEO
Why work with us? Serving Canadian Industry for over 50 Years.

VIBES Corp’s reputation was built and established on thousands of promises fulfilled over 50 years in business across Canada. Superior quality service, sales and training courses provided on the intelligent specialist level has been the standard and always will be since our vibration and balancing business was formed in Calgary, AB, in 1982. (Formerly Industrial Balancing Ltd. Est. 1967) In the final real-time analysis VIBES Corp will deliver more value and peace of mind.

What do we do? Expert technical services and preventative maintenance programs using advanced instruments and tools to solve various vibration, balance and mechanical noise related problems.

What do we sell, supply, install & service?

- WEG Electric Motors.
- METALON Hi-Tech Synthetic Grease (EP 1.5 Blue)
- COOLBLUE - Inductive Absorbers & Chokes = VFD any motor shaft current bearing damage protection.
- DRIVE SYSTEM PARTS: Fans, Bearings, Sheaves, Couplings, Belts, Shafts, Misc.

The machinery under our professional health care program = VIBES-GUARD PdM Program® are treated as if our own. We use proven technologies and methodologies along with our multi-technical and electro-mechanical (VIV, ASD, VPM, CPM, VFD, EIBD, EDM, Shaft Currents, etc.) training, skills, and experiences for total overall analysis and evaluations. When the total analyzed facts about a machine, motor or engine are known we formulate an accurate condition report and recommend the best possible solutions. We work with clients to organize necessary actions in order of urgency or budgets.

Where do we work? (Commercial Towers, Infrastructure Facilities, Industrial Plants, Lumber Processing & Marine Ports, etc.)

Our service area is mainly BC Lower Mainland and Vancouver Island. If requested we can service other areas.

Who have we worked with?

VIBES Corp service capabilities have been used and accepted by high-ranking officials in:

- power plants and dams
- sewage and water treatment plants
- government infrastructure facilities
- oil and gas
- biogas energy systems
- transportation and construction
- commercial towers
- agricultural
- mining
- ski hills
- marine-terminals & ships
- asphalt and cement
- saw mills
- pulp and paper
- research and development
- machining / fabrication
- chemical plants
- restaurants
- skytrain tunnels

VIBES Corp accepts: EFT, VISA, Mastercard, Discovery, Debit & SWIFT
We take due diligence to the highest level on all projects regardless of size or budget.

Learn About Articles

You can download educational articles from our home page at www.vibescorp.ca. Here are four recent articles:

- Electrically Induced Bearing Damage, aka Electrical Discharge Machining (EDM), Shaft Currents.
- Failure Prevention of Variable Pitch in Motion Axial Fans.

The photos below show typical projects that we have completed.

Fig 1. The failure was due to defective bearing.
Fig 2. The stainless steel guard helps prevent moisture contamination in cooling tower fan bearings (a very common problem).
Fig 3. A new fan was installed due to a complete failure of the original.
Fig 4. Shows a 200HP motor and fan repair/replacement.

**Solution to Fig. 1** Replaced both Fan Bearings & New Motor Required.

**Solution to Fig. 2** The Guard has prolonged the Life Span of the Fan Bearings from 3 years to over 14 years.

**Solution to Fig. 3** Installed Brand New Controllable Pitch Fan & Repaired Motor.

**Solution to Fig. 4** Replaced the Old Motor based on 20 years of running time and Completed Variable Pitch in Motion Fan Maintenance.
Elimination of Shaft Currents that were causing consistent motor bearing failures at this site.

Projects completed at these locations

Onsite Balancing on 1,000 HP Grinder

Restaurant Kitchen and Fresh Air Fans Upgrade

Replaced 20HP Cooling Tower Motor

Vibration & Alignment Service Job

Tug Boat Twin Diesel Engines Vibration Analysis

Asphalt Kiln Exhaust Fan Balance Job
Projects completed at these locations

- New Westminster, BC.
  Dynamic Balancing a Large Fan on site

- 2 x 125 HP Kiln-Exhaust Fan Balancing & Bearing Inspections

- Hospital Lab Hood Fans Vibration Analysis

- Geo Thermal Pump Station
  Replaced Motor Bearings, Laser Aligned & Installed Cool Blue Inductive Absorbers
Projects completed at these locations

- Laser Alignment Job
  - Teck Highland Valley Copper - Processing Plant
  - 800 HP Blower - Logan Lake

- Abbotsford Waste Water Treatment Plant
  - Complex Vibration Solution

- Naval Ship Diesel Generator - Vibration Analysis

- BC Cancer Health Care Centre
  - Vancouver
  - Vibration Analysis, Fan and Motor Repairs

- BC Hydro - MICA Power Plant
  - Vibration Analysis, and Rotor Balancing

- Vibration Control
  - beyond the normal solutions

Vibration Industrial Balancing & Equipment Services, Corporation
720 - 999 W. Broadway, Vancouver, BC  V5Z 1K5

www.vibescorp.ca   email: info@vibescorp.ca   Phone: 604 - 619 - 9381 (24/7)
Projects completed at these locations

- 400 HP Motor & Compressor
  Food Processing Plant
  Vancouver
  Vibration Analysis and Laser Alignment

- Complete Fan Assembly Replacement

- Vibration Analysis
  Pleasure
  Cruise
  Ship
  Engines
  Vancouver

- 900 HP Drill Rig RS Compressor
  Vibration Analysis and Resonance Tests

- 900 HP Drill Rig Compressor

- 100 HP Woods Fan-Variable Pitch in Motion Services

- 60 HP Joy Fan-Controllable Pitch in Motion Services
Projects completed at these locations

Customized motor plates and slide base installation

400 HP RS Compressor Coupling Laser Alignment

Sea Water Pumps & Motors Retrofit

600 HP Compressor System Laser Alignment Job

350 HP Gantry Crane Motor & Gearbox Vibration Analysis

Sky Train Tunnel Fan Vibration & Balance Job.
We take due diligence to the highest level on all projects regardless of size or budget.

The Guard has prolonged the Life Span of the Fan Bearings from 3 years to over 14 years. Variable Pitch in Motion Fan Maintenance.

Solution to Fig. 4
Replaced the Old Motor based on ISO 10816-3

This Chart is based on ISO 10816-3

VIBRATION SEVERITY GRAPH FOR GENERAL ROTATING MACHINERY

AMPLITUDE

Displacement Mils (x.001") peak to peak

Velocity
.1 ips = 2.5 mm/s

VELOCITY (ips = in./sec/) peak

AMPLITUDE

VIBRATION ANALYSIS
VELOCITY, DISPLACEMENT, ACCELERATION
VELOCITY FOR ACCEPTABILITY - DISPLACEMENT FOR BALANCING
ACCELERATION FOR BEARING HEALTH CONDITION MONITORING

REFERENCE POINT ○ = 1800 rpm machine/ motor excellent condition

ACCELERATION or FORCE OF GRAVITY "G" (ips² = in/sec²) for simplicity
ACTUAL G = 32 fps/s = 9.8 m/s/s
### Vibration Sources Identification Guide

<table>
<thead>
<tr>
<th>CAUSE</th>
<th>FREQUENCY</th>
<th>AMPLITUDE</th>
<th>PHASE</th>
<th>COMMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unbalance</td>
<td>1 x RPM</td>
<td>Highest in Radial Direction</td>
<td>Single Mark (Steady)</td>
<td>A common cause of vibration.</td>
</tr>
<tr>
<td>Defective Anti-Friction Bearings</td>
<td>Very High-Often From 10 to 100 x RPM</td>
<td>Use Velocity</td>
<td>Unstable</td>
<td>Velocity readings are highest at defective bearing. As failure approaches, the amplitude of the velocity signal will increase and its frequency will decrease. Cage frequency is approximately 0.6 x RPM x number elements.</td>
</tr>
<tr>
<td>Misalignment of Coupling or Bearing</td>
<td>1, 2 or 3 x RPM</td>
<td>High Axial Axial 50% or more of Radial</td>
<td>Often 2, Sometimes 1 or 3</td>
<td>Use phase analysis to determine relative movement of machine or bearings. Use a dial indicator if possible. Often diagnosed as a bent shaft. Can be caused by misalignment of V belts.</td>
</tr>
<tr>
<td>Sleeve Bearing</td>
<td>1 x RPM</td>
<td>Not Large Use Displacement Mode Up to 6000 CPM</td>
<td>Single Reference Mark</td>
<td>May appear to be unbalanced. Shaft and bearing amplitude should be taken. If shaft vibration is larger than the bearing, vibration amplitude indicates clearance.</td>
</tr>
<tr>
<td>Bent Shaft</td>
<td>1 or 2 x RPM</td>
<td>High Axial</td>
<td>1 or 2</td>
<td>Similar to misalignment. Use phase analysis.</td>
</tr>
<tr>
<td>Defective Gears</td>
<td>High No. Gear Teeth x RPM</td>
<td>Radial</td>
<td>Unsteady</td>
<td>Use velocity measurement. Often affected by misalignment. Generally accompanied by side band frequency. Pitting, scuffing and fractures are often caused by torsional vibrations. Frequency sometimes as high as 1 million CPM or more.</td>
</tr>
<tr>
<td>Mechanical Looseness</td>
<td>2 x RPM</td>
<td>Proportional to Looseness</td>
<td>1 or 2</td>
<td>Check movement of mounting bolts in relation to the machine base. Difference between base and machine indicates amount of looseness.</td>
</tr>
<tr>
<td>Defective Drive Belts</td>
<td>1 or 2 x Belt Speed</td>
<td>Erratic</td>
<td></td>
<td>Calculate the belt RPM using:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Belt RPM = pulley Diameter * 3.141 x 3.141 x pulley RPM</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Look for cracks, hard spots, soft spots or lumps. Loose belt. Changes with belt tension.</td>
</tr>
<tr>
<td>Electrical</td>
<td>1 or 2 x Line Frequency (3600 or 7200 CPM for 60Hz Power) May appear at 1 x RPM</td>
<td>Usually Low</td>
<td>1 or 2 Marks Sometimes Slipping</td>
<td>Looks like mechanical unbalance until power is removed. Then drops dramatically.</td>
</tr>
<tr>
<td>Oil Whip</td>
<td>45 - 55% RPM</td>
<td>Radial Unsteady</td>
<td>Unstable</td>
<td>Caused by excessive clearance in sleeve bearings or by underloaded bearings. Will change with viscosity of oil (temperature).</td>
</tr>
<tr>
<td>Hydraulic-Aerodynamic</td>
<td>No. Blades or Vanes x RPM</td>
<td>Erratic</td>
<td>Unsteady</td>
<td>May excite resonance problems.</td>
</tr>
<tr>
<td>Beat Frequency</td>
<td>Near 1 x RPM</td>
<td>Variable at Beat Rate</td>
<td>Rotates at Beat Frequency</td>
<td>Caused by two machines, mounted on same base, running at close to same RPM.</td>
</tr>
<tr>
<td>Resonance</td>
<td>Specific Critical Speeds</td>
<td>High</td>
<td>Single Reference Mark</td>
<td>Phase will shift 180° going through resonance (90° at resonance). Amplitude will peak at resonance. Resonance in frame can be removed by changing rotor operating speed or by changing the stiffness of the structure.</td>
</tr>
